Project Design Phase
Proposed Solution Template

Date	30 June 2026
Roll No	23A51A42A3
Project Name	Metro Ticket Generating System using ServiceNow
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1	**Problem Statement (Problem to be solved)**	The existing metro ticket booking process is time-consuming and relies heavily on manual operations, resulting in long waiting queues, delays in ticket issuance, and difficulty in maintaining booking records. Passengers need a faster and more efficient method to book metro tickets, while administrators require a centralized system to manage bookings accurately.
2	**Idea / Solution Description**	The proposed solution is a **Metro Ticket Generating System** developed on the **ServiceNow platform**. The application enables passengers to book metro tickets through a Service Catalog by selecting the source and destination stations. The system automatically calculates the fare, creates booking records in custom tables, and uses Flow Designer to automate ticket generation and notifications. Administrators can manage bookings and generate reports through a centralized platform.
3	**Novelty / Uniqueness**	The solution integrates ServiceNow's low-code capabilities to automate the complete metro ticket booking workflow. It combines Service Catalog, Flow Designer, Business Rules, custom tables, notifications, and reporting into a single platform, providing a centralized and automated ticket management solution.
4	**Social Impact / Customer Satisfaction**	The application reduces waiting time at metro stations, minimizes manual effort, improves booking accuracy, and enhances the overall travel experience. Passengers benefit from a quick and convenient booking process, while administrators gain better control over ticket management and record maintenance.
5	**Business Model (Revenue Model)**	The solution can be adopted by metro transportation authorities as an internal ticket management system. Revenue is generated through regular metro ticket sales, while the application helps reduce operational costs by automating ticket booking and record management processes.
6	**Scalability of the Solution**	Since the application is built on the ServiceNow cloud platform, it can support increasing numbers of users, metro stations, and ticket bookings. Additional features such as online payment integration, QR-code-based ticket validation, mobile application support, and real-time metro schedules can be added in future versions without significant architectural changes.
