Project Design Phase
Solution Architecture

Date	30 June 2026
Roll No	23A51A42A3
Project Name	Metro Ticket Generating System using ServiceNow
Maximum Marks	4 Marks

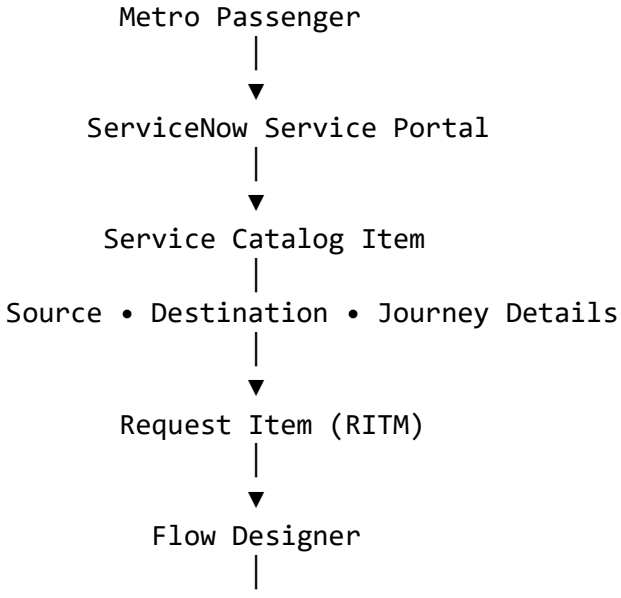

Solution Architecture

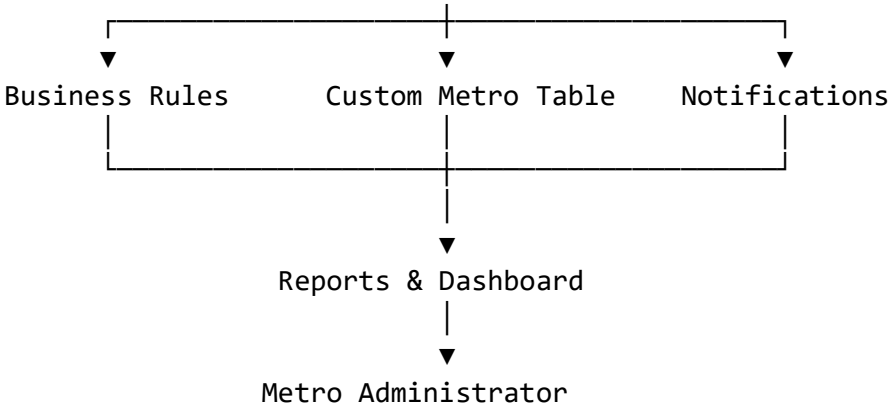

The **Metro Ticket Generating System** is developed on the **ServiceNow platform** to automate the metro ticket booking process. The application allows passengers to book metro tickets through the Service Portal using a Service Catalog item. Users enter journey details such as the source station and destination station, after which the system validates the input and calculates the fare.

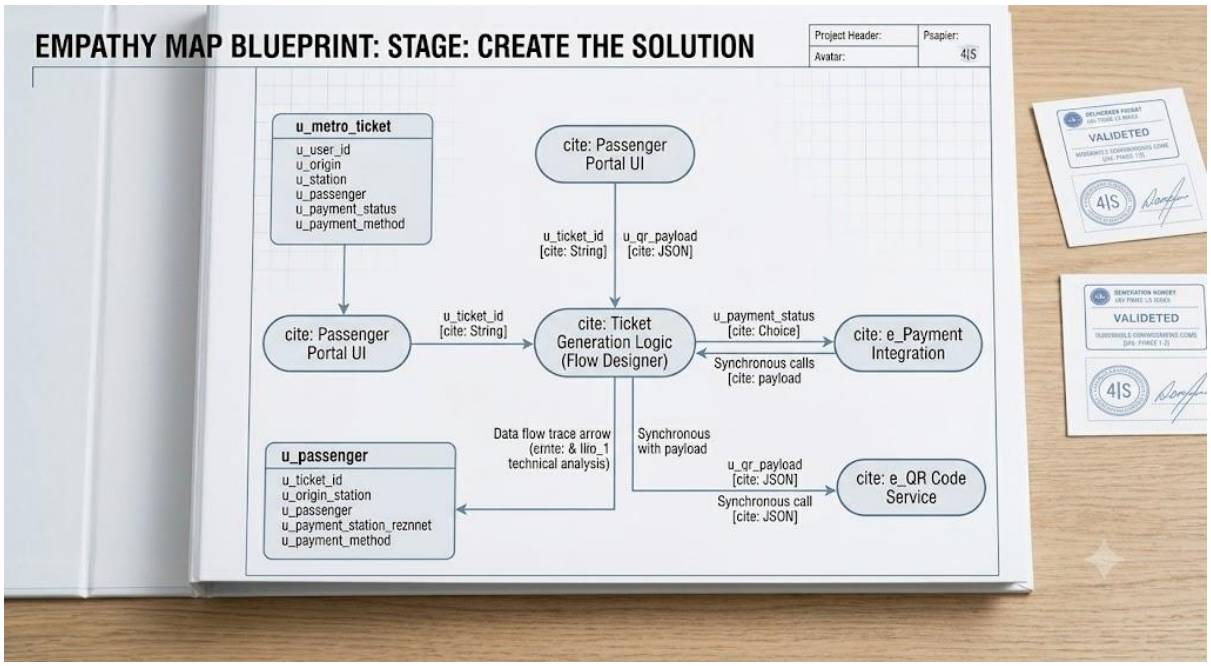

Once the booking request is submitted, the Service Catalog creates a Request Item (RITM). Flow Designer automates the ticket booking workflow by processing the request and storing the booking details in a custom Metro Ticket table. Business Rules perform data validation and generate the required booking information. Notifications are sent to passengers to confirm successful ticket booking. Administrators can view and manage all booking records through the ServiceNow interface, while reports and dashboards provide insights into booking activities.

The architecture provides a centralized, secure, and scalable solution for metro ticket management by integrating the Service Portal, Service Catalog, Flow Designer, Business Rules, custom tables, notifications, reports, and dashboards within the ServiceNow cloud platform.

Solution Architecture Diagram

Components Used

Component	Purpose
Service Portal	User interface for metro ticket booking
Service Catalog	Allows users to request metro tickets
Catalog Variables	Collect source, destination, and journey details
Request Item (RITM)	Stores the submitted booking request
Flow Designer	Automates the booking workflow
Business Rules	Validates data and processes ticket information
Custom Metro Ticket Table	Stores metro ticket booking records
Notifications	Sends booking confirmation messages
Reports & Dashboards	Displays booking statistics and reports
ServiceNow Cloud Platform	Hosts the complete application
